Professional Summary

Front-end and full-stack engineer with 8+ years building responsive, component-driven web applications in React, JavaScript and Node.js for healthcare, life sciences and small-business clients. Ships reusable UI libraries and design systems backed by RESTful APIs, PostgreSQL and AWS, and has cut page load times by up to 30%. Now diagnoses about 10 enterprise AI and cloud servers a day for Microsoft and NVIDIA programs at Quanta, adding hands-on root-cause analysis, testing and documentation discipline. U.S. Citizen.

Technical Skills

- **Front-End:** JavaScript (ES6+), HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap, jQuery, responsive and mobile-first design, cross-browser compatibility
- **Frameworks & Architecture:** React (Hooks, Context API), Vite, component-driven development, reusable UI libraries, design systems
- **Back-End & APIs:** Node.js, Express, Java, Python, RESTful services, GraphQL, MERN stack
- **Databases:** PostgreSQL, MySQL, MongoDB, Sequelize, Mongoose
- **Cloud & DevOps:** AWS (EC2, Lambda), CI/CD pipelines
- **Performance & Quality:** Code splitting, lazy loading, asset optimization, Chrome DevTools profiling
- **Workflow:** Git, GitHub, Agile/Scrum, requirements gathering, stakeholder communication
- **Systems & Hardware:** Server diagnostics, root-cause analysis, system testing and validation, technical documentation

Professional Experience

Technical Diagnostics Specialist | Quanta Manufacturing | Fremont, CA | Mar 2026 – Present

- Diagnose and repair about 10 enterprise AI and cloud servers per day for Microsoft and NVIDIA data center programs in a high-volume production environment.
- Isolate faults across CPU, memory, GPU, storage, power and networking components, and perform root-cause analysis that feeds back to engineering to improve product reliability.
- Run system testing, validation and quality checks to confirm each unit meets customer standards before release.
- Maintain detailed technical documentation of diagnostics, repairs and test results for engineering and QA teams, and recommend process improvements that reduce defect rates.

Freelance Full-Stack Web Developer | Remote | Jan 2025 – Feb 2026

- Built and deployed full-stack web applications for small-business and organizational clients, with responsive front ends in React, Vite and Tailwind CSS.
- Developed the RESTful APIs and database layers behind each site, connecting UI components to live data and business logic.
- Hosted client applications on AWS, running servers on EC2 and serverless functions on Lambda.
- Designed a reusable component library and design system, so new pages were assembled from shared modules instead of rebuilt.
- Cut page load time by up to 30% through code splitting, lazy loading and asset optimization.
- Gathered requirements directly from clients and turned them into technical specifications and delivery plans.

Front-End Developer | Cancer Care Institute | San Jose, CA | Apr 2021 – Dec 2024

- Designed and built scalable, reusable React components for patient- and staff-facing applications.
- Improved application load times by 20% through performance profiling and optimization.
- Implemented responsive, mobile-first interfaces with Bootstrap that worked consistently across devices and browsers.

- Diagnosed and resolved production front-end issues with Chrome DevTools, keeping deployed sites stable.
- Worked with designers, back-end developers and clinical stakeholders to deliver UI features on schedule.

Front-End Developer | BaseHealth | Sunnyvale, CA | Jun 2018 – Mar 2021

- Developed responsive web applications in React and Tailwind CSS, integrated with RESTful back-end services.
- Reduced CSS maintenance time by 30% by moving to a library of reusable, component-driven UI modules.
- Improved application performance by 25% through code optimization.
- Implemented React Hooks and the Context API for predictable, maintainable state management.

Full-Stack Developer | Clear Lab Inc. | Menlo Park, CA | May 2017 – May 2018

- Built data-driven web applications with HTML, CSS, JavaScript and Python, and enhanced back-end data processing workflows supporting lab operations.
- Developed Java-based RESTful services and integrated them with the JavaScript front end.
- Deployed applications to AWS through automated CI/CD pipelines that ran builds and checks on each merge.
- Delivered features on schedule in an Agile team, using Git for version control and code review.

Education

Full-Stack Web Development Certificate | UC Berkeley Extension (Coding Boot Camp) | Berkeley, CA | 2024

Computer Science Coursework | University of Saskatchewan | Saskatoon, Canada | 2012 – 2015
